

Symposium des Deutschen Ethikrates

ÖFFENTLICHE TAGUNG

„Selbstvermessen: Ethik und Ästhetik veränderter Körperlichkeit“

17. November 2021, 10:00 Uhr bis 18:00 Uhr

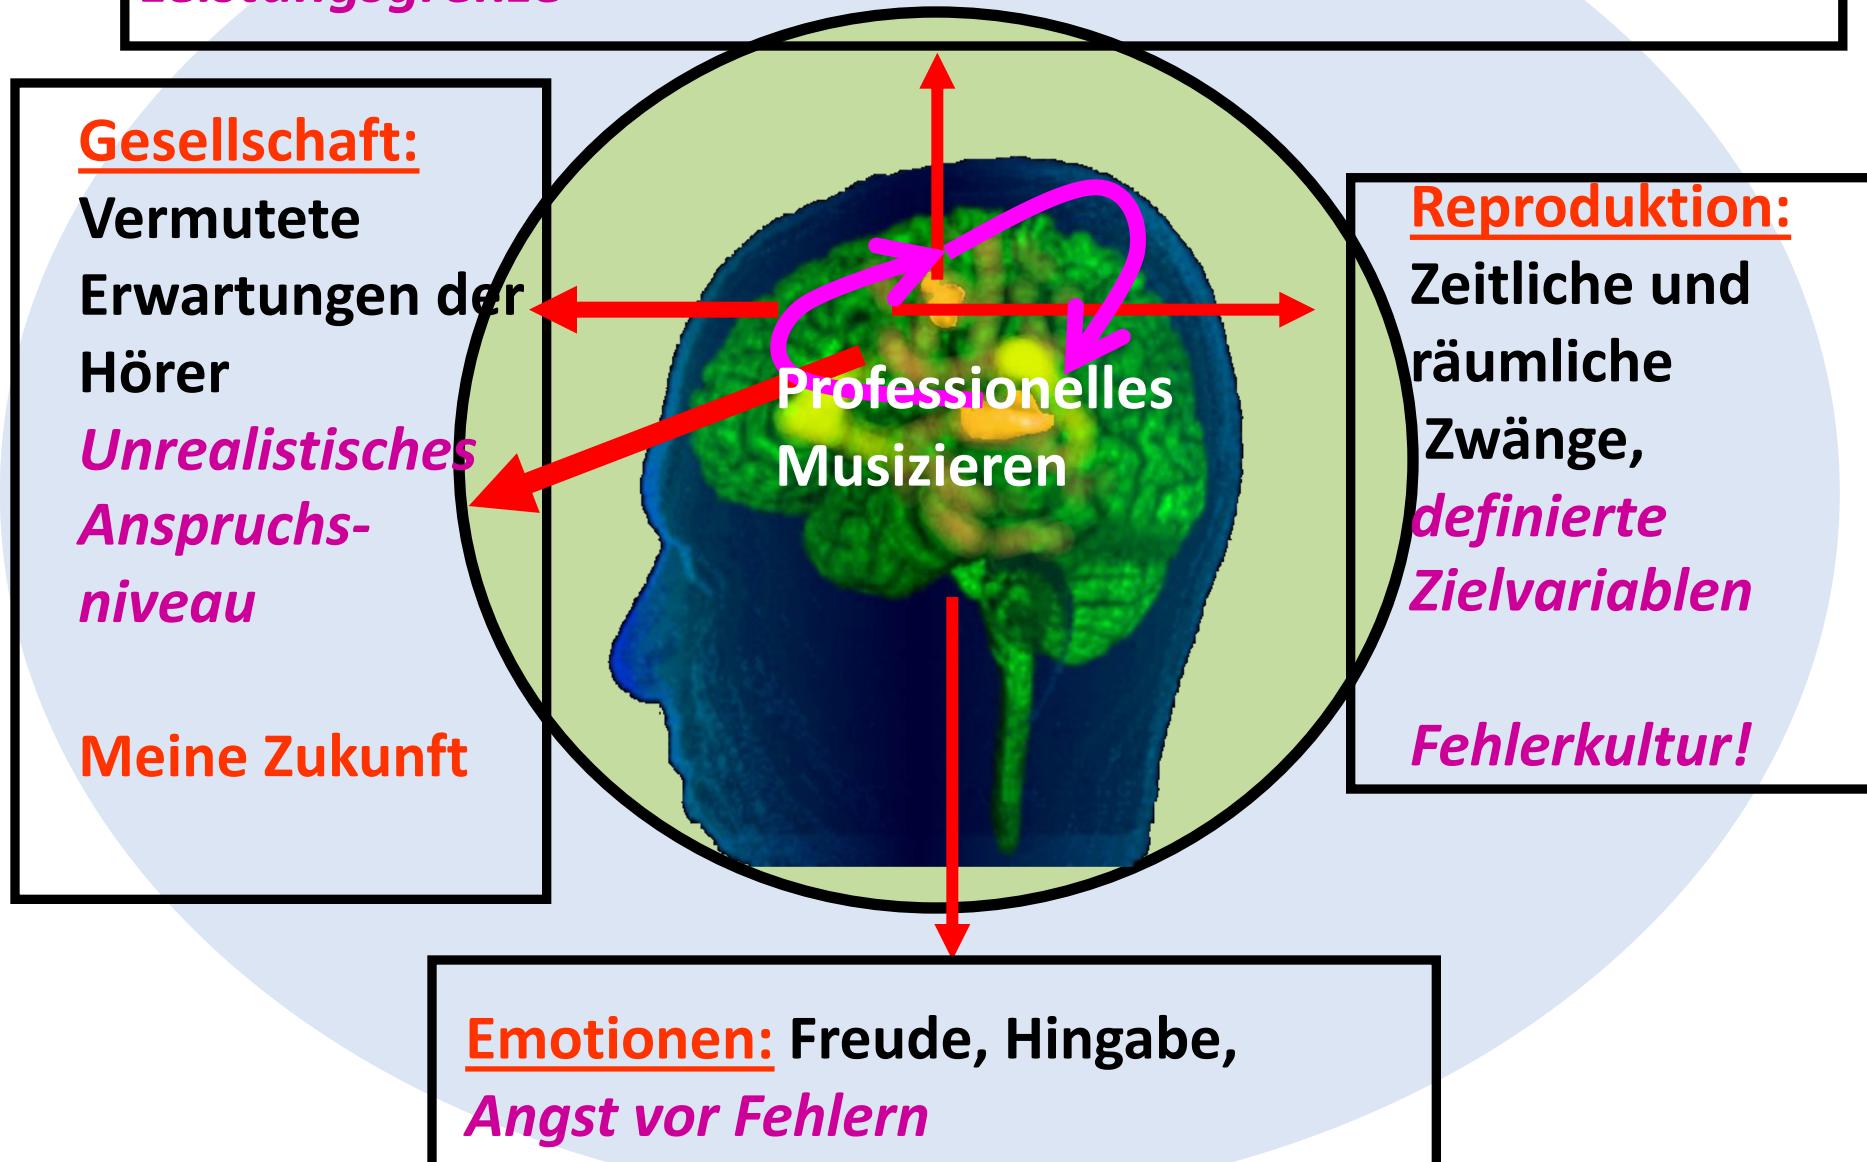

Online-Veranstaltung

Hochschule für Musik, Theater und Medien, Hannover

eckart.altenmueller@hmtm-hannover.de
www.immm.hmtm-hannover.de

Bewegung: Komplexität, hohe Geschwindigkeit der motorischen Funktionen ohne Begrenzung nach oben: *Arbeiten an der Leistungsgrenze*

Die fünf Besonderheiten der Musiker_Innen-Gesundheit

- Beginn der „Berufsausbildung“ in Kindheit/Jugend
(Selbstdefinition über das Musizieren)
- Lustbetonte, stark mit Emotionen besetzte Tätigkeit
(Angst bei Bedrohung der Berufsfähigkeit)
- Arbeiten an der körperlich-geistigen Leistungsgrenze
(Störanfälligkeit bei minimalen Defiziten)
- Kontinuierliche Überprüfbarkeit der Leistung durch das Gehör
(Extrem hoher gesellschaftlicher Druck)
- Häufig ungünstige Instrumenten-Ergonomie
(erhöhte Prävalenz von Schmerzsyndromen)

Research plan (Dr. Takanori Oku)

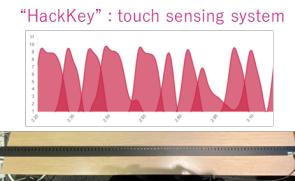

(with Sony CSL)

1. Deployment of our multimodal-recording & ability measurement system in Hannover

Multimodal-recording system

Touch & Pedaling

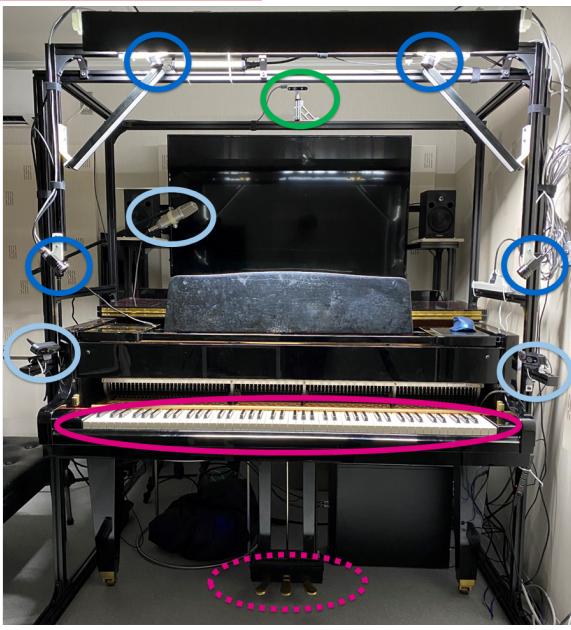

Pedal Sensor

Body Pose

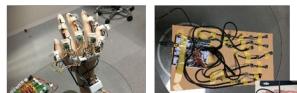

Depth-image based bone estimation

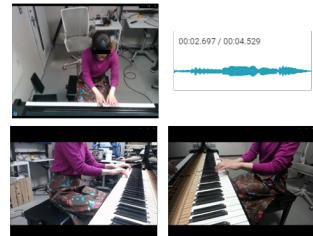

Finger Pose Recognition

DataGlove

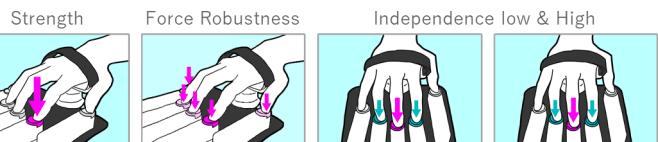

Movie & Sound
3 x Web-camera & mic

Ability measurement system

Strength

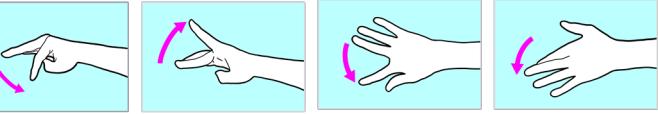

Force Robustness

Independence low & High

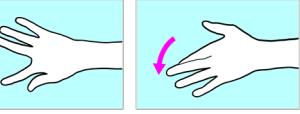

Flexion (Active)

Extension (Active)

Inward (Active)

Outward (Active)

Flexion (Passive)

Extension (Passive)

Inward (Passive)

Outward (Passive)

Checkup of piano skill and ability

- Fastest tempo
 - Correctness of rhythm and loudness
 - Alignment of chord striking timing
- etc...

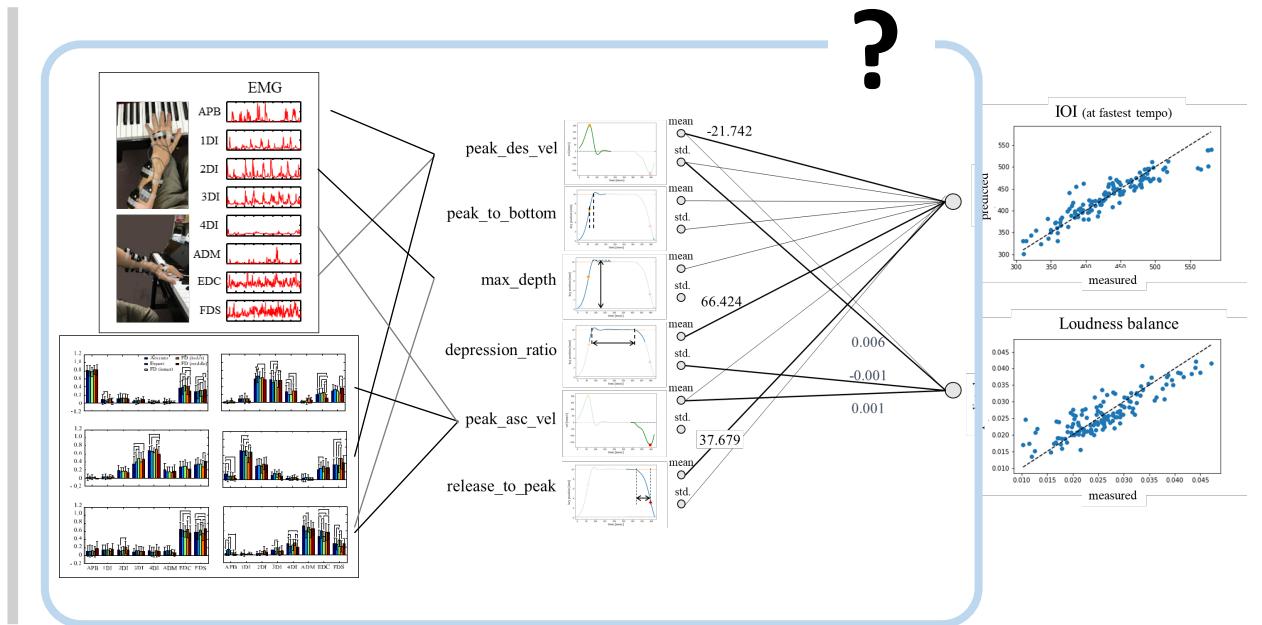

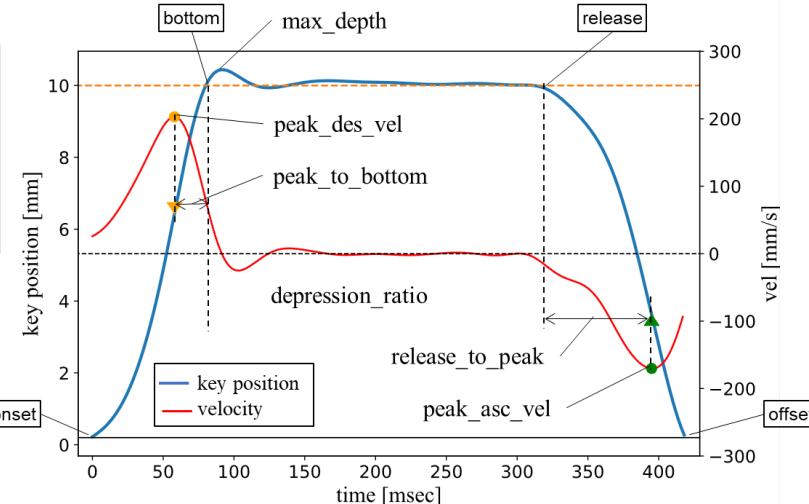

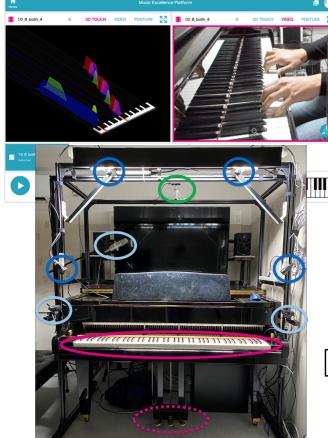

- Agility (fastest tapping)
 - Moving range of joints
 - Haptic sensitivity
- etc...

- Making large multi-modal dataset of performance of expert pianists
- Analysis of relationship between the piano skill and ability

Oct. 2021 ~

Research plan

2. Motion measurement and analysis of pianist with musician's dystonia

We can obtain more spatiotemporally precise multi-modal information about key-striking

Purpose

To find

MD's symptom related

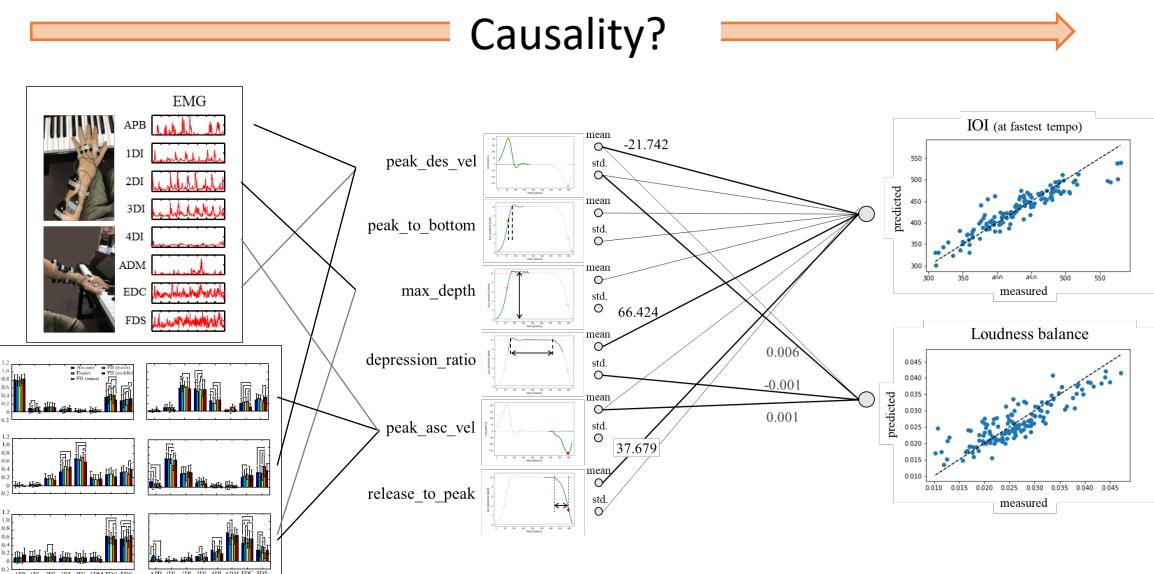

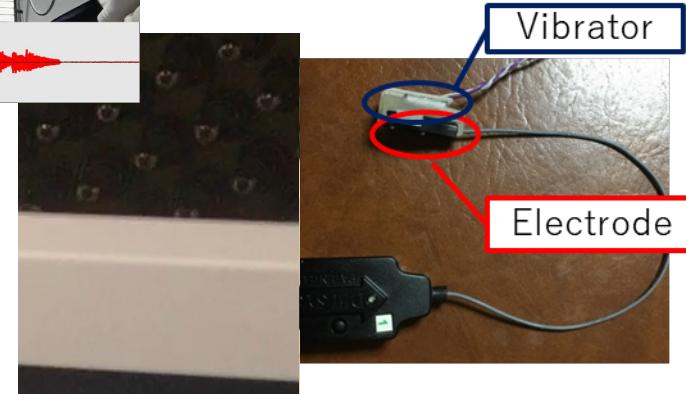

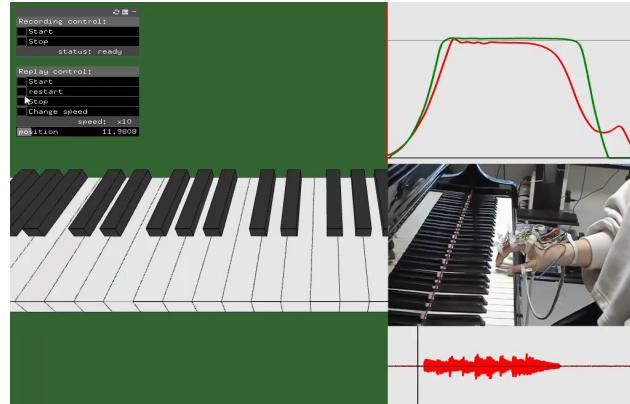

spatiotemporal feature of key-strokes
 Abnormal muscle activity
 muscular incoordination
 ...

Method

- Comparison between
 - Expert
 - Non-expert
 - MD
- Regression analysis

Research plan

3. Biofeedback training for pianist with musicians' dystonia (intervention)

Purpose

Visual or vibrotactile biofeedback of

MD's symptom related

spatiotemporal feature of key-strokes
 abnormal muscle activity
 muscular incoordination

Verification of causality

Method

- Pre-test → intervention → post-test
- Comparison between
 - Target (feedback of symptom related feature)
 - Control 1 (feedback of irrelevant feature)
 - Control 2 (rest)
